## **TEACHING STATISTICS IN SCHOOLS THROUGHOUT THE WORLD**

**Ed. V. Barnett**

a new publication of the  
**INTERNATIONAL STATISTICAL INSTITUTE**

(pp XVI, 250, 1982)

The volume presents a review of the exact nature of statistical education in approximately 20 different countries. For each country (or group of countries) considered, an individual with first-hand experience of the prevailing circumstances has presented a personal description of the present situation, of the way in which it has developed and of possible future prospects. The countries covered are from well developed and developing countries.

The general structure of school education in each country is outlined in order to clarify understanding of the details of the provisions made for teaching statistics. The outline includes information on types of schools, the pupils they cater for, principles of administration of the educational system, methods of teacher training, patterns for examinations prospects for curriculum reform etc.

The volume is intended to be of service not only to those involved in teaching statistics as a separate discipline within schools, but also to those teachers and educators who are involved with teaching statistics as part of other disciplines: biology, chemistry, mathematics, physics, the social sciences for example.
